Crank compatibility	
Φ24mm through axle	
● Sugino : IDS24	IDS 24 Φ24mm Axle
● Shimano : HOLLOWTECH II	

Seal system

The waterproof & dustproof performance is further ensured by the sophisticated super-low friction seal system while realizing even smoother rotation, which is completely unique.

WATER PROOF DESIGN

Due to special seal system, the bearings don't require internal maintenance.

Made-in-Japan highest grade, high precision, ceramic bearing is used. The extremely low friction feature ensures super smooth rotation.

Gasket-ring

The gasket-rings provide secure fitting and keep water out of the frame. No thread locking agents (such as Lock Tight) are required. BB can easily be installed, removed and reused without fitting degradation, making the BB shell ideal maintenance hatch for internal cables.
